ENGIN EERING

AFFORDABLE BILLET RODS
Finally, stronger billet rods at a reasonable cost. Some are hard-to-find at any cost. We’ve also improved on the popular 4G63/EVO rod by upgrading to larger (stronger) 7/16” bolts for severe boost. All rods are machined from premium 4340 steel billet and include ARP2000 hardware. Final honing and assembly is done with the latest Sunnen technology for unmatched accuracy and correct clearances.

DON’T YOU DESERVE BILLETS?

RACE H-BEAM BILLET RODS
for TOYOTA 4AG........................................... $469.00
Fits 20mm wrist pin

H-BEAM BILLET RODS
for MITSUBISHI......................................... $495.00
4G63 (Gen2) and EVO 1-8 motors features 7/16” bolts for a massive increase in strength. Compare to 3/8” bolts used in all other brands. We include these at no added cost to reduce the chance of bolt failure in extreme boost applications.

I-BEAM BILLET RODS
for HONDA............................................... $396.00 SPECIAL
Made for use by one of the best known US rod/crankshaft manufacturers. Double ribbed cap and side footpads helps prevent big end distortion and potential oil starvation issues. Fits B20B, B18A & B18B engines.

BILLET MAIN
CAPS for
2JZ MOTORS........................................... $529.00
Our new billet caps are CNC machined from virgin 4150 billet steel alloy and properly heat treated to maximum strength without becoming brittle. No modification needed to install flanged bearings like other brands. Made in the USA.

NEW PRO SERIES CAMS
for HONDA VTEC B16/B18/B20B........... $445.00
Our own custom grind for VTEC engines with a unique duration design. Our turbo cam allows the turbocharger to spool up faster. This creates the mid-range power you need to achieve full engine output faster. You can’t use all that horsepower until the RPM gets there!
We also stock an N/A grind (all motor or nitrous) that enhances mid-range power. More available mid-range torque than other grinds.

BULLETPROOF ALLOY WRIST PINS .... $125.00 ea.
Quit blaming your pistons and rods for pin failure. Designed for the professional racer running extreme boost levels. Super thick to prevent flex, DLC coated for durability, proprietary aerospace alloy. Tested to 60 PSI. Made in the USA!
